FOUR FEATURE TWEAKS + DESKTOP FIXES

2026-07-06

Four feature tweaks (from friends' feedback) plus a couple of desktop fixes.

1

RESIZABLE DESKTOP PANEL

- Grab the diagonal-striped handle in the bottom-right corner and drag to make the panel bigger or smaller (width and height).
- Minimum size ~340×260; it won't grow past the screen edges.
- The size is remembered (saved in your browser, like the drag position), so it reopens at the size you left it.
- Desktop only — on a phone (the bottom-sheet "Wizard") and while minimized, the handle is hidden and sizing is automatic.

2

MULTI-SELECT PLAYERS → BATCH APPLY

- Apply the same PlayStyles to several players in one run.
- Every player row now has a checkbox on the left. Tick the players you want — ticking one also brings it into focus (its preview shows on the right).
- A green "N selected for batch apply" bar appears, with a Clear button.
- Pick your PlayStyles once, then hit Apply selected — it applies to all ticked players, one after another.
- A roll-call ("Applying selected PlayStyles to N players: ...") shows above the Apply button so you can see exactly who's affected before you go.
- Each player is checked individually: any PlayStyle a player already owns, can't fit (its own 3 PS+ / 8 basic caps), or that's GK-only on an outfielder is reported as skipped, not a failure. The result shows a section per player with what was added / failed / skipped.
- Suggest (and its position/role dropdowns) is greyed out while more than one player is ticked — it only works on a single player. Manual ticking still works in batch mode.
- With nothing ticked, Apply behaves exactly as before (just the previewed player).

3

RESET / REMOVE EVOS

- You can now remove PlayStyles from a card, matching the EA web app's clear ability.
- On the preview card, two buttons: Remove Latest Evo and Clear all evos.
- Remove Latest Evo removes the most recently applied upgrade.
- Clear all evos removes them one by one until the card fully reverts.
- Both always ask you to confirm first. A spinner + live count shows the progress right under the buttons.
- Important wording: the game removes evo upgrades newest-first, and there's no way to pick a specific one or to know in advance whether the next one is a PlayStyle or a stat/skill upgrade. So the buttons say "evo", not "PlayStyle", and the confirm warns you. Clear all reverts the card, which can make it leave your club evo list.

FIXES · V2 BUG SQUASHES

- ✓ Desktop scrolling is reliable again — the PlayStyle grid / right side scrolls fully, including after minimizing and re-opening the panel (a bug there collapsed the scroll).
- ✓ The "← Back to players" button after applying now only shows on mobile (on desktop the player list is always visible, so it was redundant).

FOUNDATION RELEASE

2026-07-06

1**RESPONSIVE LAYOUT**

- Desktop Split Console (players left, build + apply right) and mobile Wizard (3-step bottom sheet).

2**DRAG THE PANEL**

- Drag the panel by its header; position remembered.

3**PLAYSTYLE+ ICONS ON ROWS**

- PlayStyle+ icons shown inline on each player row.

4**PHASE 1 FOUNDATION**

- Full-club picker, preview card, PlayStyle/PS+ icon grid, Suggest, apply loop with delay/Stop, state-safe refresh — see PLAN.md.
