How to run, fix, and rebuild the bookmarklet

RE-RUN

in app

1

WHAT IT IS

A single **bookmarklet** for the EA FC 26 Web App. It adds a floating panel that lets you pick a club player, tick PlayStyles / PlayStyle+, and apply them all at once. It drives the app's own logged-in services — no passwords, no servers.

The panel header reads: "**Men Gallant FC - Justaino PS Tool**"

It is **responsive**: on a computer it opens as a wide two-pane panel; on a phone it opens as a full-width step-by-step sheet (see §3). Same features either way.

2

RUNNING IT DAY-TO-DAY

1

SAVE IT

Make sure the bookmarklet is saved as a bookmark — its URL is the one long line in bookmarklet.txt, starting with javascript:.

2

OPEN THE APP

Open the FC Web App and let your club load.

3

CLICK IT

Click the bookmark. The panel appears bottom-right.

Every **click rebuilds fresh**. Clicking the bookmark again (or re-pasting the source) tears down the old panel and styles and rebuilds with the latest code — no manual reset needed after an update. The already-loaded club is carried over so the rebuild is instant; hit **■ Reload club** if you want a fresh pull.

Hard reset (only if something is truly stuck, or to clear the window.FC26 namespace) — paste into the Console (F12 → Console):

```
document.getElementById('fc26-panel')?.remove();
document.getElementById('fc26-style')?.remove();
delete window.FC26;
```

3

THE PANEL — TWO LAYOUTS

The panel automatically picks a layout based on your screen width. All the parts below are the same in both — they are just arranged differently.

PC

SPLIT CONSOLE (WIDE SCREEN)

Left column = your squad: Reload club, search box, Only evo-eligible filter, and the player list. Right column = build & apply: preview card, Suggest row, PlayStyle tabs + grid, and the Apply button.

PH

WIZARD (PHONE / NARROW SCREEN)

A bottom sheet, one step at a time. Step 1 Player: search + filter + list. Step 2 PlayStyles: Suggest + tabs + grid. Step 3 Apply: preview card + Apply button. A stepper up top shows where you are.

3A · THE PARTS — BOTH LAYOUTS

- ■ **Reload club** — Loads every player in your club (not just your squad). Use it if you've just opened or changed your club.
- **Search box** — Filter the player list by name.
- ■ **Only evo-eligible (N rarities)** — Hides cards that can't take PlayStyles (§4).
- **Player list** — Rating, name, PlayStyle+ icons already held (gold, right-aligned), GK badge and rarity. Click/tap to select.
- **Preview card** — Name, OVR, GK; rarity name + rarity #NN; positions; item ID; eligibility row; capacity pips (3 PS+ gold, 8 Basic emerald); current PlayStyles as chips.
- ■ **Suggest** — Position + role dropdowns that pre-tick the recommended PlayStyles — top 3 as PS+, the rest Basic.

- **PlayStyle tabs + grid** — Tick what you want. Owned ones disabled; GK-only hidden for outfielders; caps enforced (3 PS+, 8 Basic). Live counter shown.
- **Delay between applies (ms)** — Pause between each apply, default 500ms. Bigger = gentler on the account.
- **Apply selected / Stop** — Runs the queue. Each tile spins then ticks as it lands. Ends with an "Added N to [player]" summary. Stop halts after the current apply finishes.

4

THE EVO-ELIGIBLE LIST

Only certain card rarities can receive PlayStyles. The tool keeps its own list of eligible rarities and uses it for the Only evo-eligible filter.

How the list is built:

- **Seed** — a small starting guess baked into the code (**ELIG_SEED**, currently **[30, 98, 109]**).
- **Self-learning** — every time an Apply succeeds, that card's rarity is proven eligible and added automatically.
- **Manual** — you can add/remove rarities yourself (see §4B).

The list is saved in the browser (localStorage), so it survives reloads.

4A · HOW TO KNOW A RARITY'S NUMBER

- Easiest: click the player. The preview card's second line shows it, e.g. **Team of the Season Champions · rarity #127 · ST · item 123456**.
- Via Console: select a player, then run:

```
window.FC26.state.player.rareflag
```

4B · UPDATING THE ELIGIBLE LIST THROUGH CODE

Paste any of these into the Console while the panel is open. Each one saves the change, redraws the panel, and prints the updated list:

```
window.FC26.eligible.list()           // show current eligible rarity numbers
window.FC26.eligible.add(147)        // add rarity 147 (e.g. FUT Birthday EV0)
window.FC26.eligible.remove(30)      // remove rarity 30
window.FC26.eligible.clear()         // empty the whole list
```

You can also do it without code: select a card and use the **Mark eligible / Remove** button on its preview card.

4C · TWO LAYERS — SEED VS LIVE LIST

- The live list (what the filter uses) lives in the browser. Edit it with the commands in §4B — this is what you'll change 99% of the time.
- The seed (**ELIG_SEED** in `fc26-tools.js`) is only the first-run starting point. Once a live list exists, the seed is ignored. To reset, edit it and clear the live list:

```
window.FC26.eligible.clear()         // then re-run the bookmarklet
```

4D · WIPE EVERYTHING AND START FRESH

```
localStorage.removeItem('FC26_eligibleRarities');
localStorage.removeItem('FC26_onlyEligible');
```

Then hard reset + re-run (§2). The list goes back to the seed and the filter turns off.

5

FIXING A RARITY SHOWN AS "RARITY NN"

That's a missing display name, separate from eligibility. Names live in the **RARITIES** object near the top of `fc26-tools.js`. To add one, drop a number:Name pair into that object, e.g.:

```
"127":"Team of the Season Champions",
```

Then rebuild the bookmarklet (§7). Or just tell Claude the number + name and it'll add it. (Find the number using §4A.)

6

CHANGING THE THEME / COLOURS

All colours live in ONE place: the token block at the top of the injected styles in **fc26-tools.js** — a chunk starting with **#fc26-panel{ --radius:....** Edit a value and rebuild (§7). Everything else reads these **var(--name)** tokens.

Current theme: Emerald frosted glass. If text feels low-contrast over a busy screen, raise the panel tint's opacity:

```
--bg:rgba(18,42,35,.58) → increase last number, e.g. .70 or .80
```

7

EDITING THE SOURCE & REBUILDING

1

EDIT THE SOURCE

fc26-tools.js is the readable source — the thing you change.

2

REBUILD

From the project folder run: `node minify.js`

3

UPDATE YOUR BOOKMARK

Copy the new bookmarklet.txt line into your bookmark's URL, or paste fc26-tools.js straight into the Console while testing.

4

RE-RUN

Click the bookmark / paste again — it rebuilds itself, no reset needed.

★ BUILD TIP

minify.js strips comments, joins to one line, syntax-checks, and writes bookmarklet.txt. SYNTAX OK = good. A syntax error means something broke — fix and re-run.

8

TROUBLESHOOTING

Symptom	Fix
Panel won't open / half-styled	Click the bookmark again — it rebuilds. If still stuck, hard reset (\$2).
New colours didn't apply	Re-click the bookmark — it re-injects styles every time.
No club players found	Open your Club in the app, then click ■ Reload club.
Apply fails with 460 ineligible	Card can't take that PlayStyle — already has it, capped, or rarity/OVR not allowed. Normal.
Eligible filter shows a card that won't evo	Select it → Remove on its card (the seed was a guess).
Console prints undefined	Just the Console echoing no return value — check the lines above it.
